Allows homeowner to open window and keep rain, snow, leaves, toys and children from falling into the window well.

### Sample Window

### How to measure for your Custom Egress Cover

- Measure the overall width of your metal container, next to the house (extreme outside).
- Measure from the siding to the outside of the metal container. (Allow for the siding to hang out farther than the window.)
- Measure from the top ring of the metal container to the top of the egress window. One inch will be allowed for clearance from the top of the window (when open) to the top of the egress cover so the window will clear the egress cover.
